VOLUME 7, 1989

AUTHOR/TITLE INDEX

Abstracts from the Second International Sopron Symposium—Molecular Recognition: Its Role in Chemistry and Biochemistry 93
Abstracts from the Eighth Annual Meeting of the Molecular Graphics Society 170
Andrews, P. R., Quint, G., Winkler, D. A., Richardson, D., Sadek, M. and Spurling, T. H. Morpheus: a conformation-activity relationships and receptor modeling package 138
Arata, Y. *See* Ito, W.

Bartlett, R. J. *See* Sosa, C.
Blandon, P. A rapid method for comparing and matching the spherical parameter surfaces of molecules and other irregular objects 130
Bohacek, R. S. and Guida, W. C. A rapid method for the computation, comparison and display of molecular volumes 113
Bohl, M., Schubert, G., Ponsold, K., Reck, G., Höhne, E. and Simon, K. Molecular mechanics and X-ray crystal structure in investigations on conformations of 11β substituted 4,9-dien-3-one steroids 122
Bosshard, H. E. *See* McGavin, S.
Brint, A. T., Davies, H. M., Mitchell, E. M. and Willett, P. Rapid geometric searching in protein structures 48

Carlson, C. *See* McGavin, S.

Davies, H. M. *See* Brint, A. T.
Duax, W. L., Langs, D. A., Pangborn, W. A., Smith, G. D., Pletnev, V. Z. and Ivanov, V. T. Molecular conformation and ion transport of cyclic and linear ionophores 82

Etter, M. C. and Vojta, G. M. The use of solid-state NMR and X-ray crystallography as complementary tools for studying molecular recognition 3
Eufri, D. and Sironi, A. SMILE—shaded molecular imaging on low-cost equipment 165

Ferenczy, G. G. and Morris, G. M. The active site of cytochrome P–450 nifedipine oxidase: a model-building study 206
Forster, M., Jones, C. and Mulloy, B. NOEMOL: integrated molecular graphics and the simulation of Nuclear Overhauser Effects in NMR spectroscopy 196

Geller, M. *See* Swanson, S. M.
Goodford, P. J. *See* Reynolds, C. A.
Goodsell, D. S., Mian, I. S. and Olson, A. J. Rendering volumetric data in molecular systems 41
Guida, W. C. *See* Bohacek, R. S.
Gund, T. M. *See* Hermsmeier, M. A.
Gwilliam, M. and Max, N. Atoms with shadows—an area-based algorithm for cast shadows on space-filling molecular models 54

Hakoshima, T. *See* Tomita, K.
Haneef, I., Talbot, S. J. and Stockley, P. G. Modeling loop structures in proteins and nucleic acids: an RNA stem-loop 186
Hausheer, R. G. *See* Palmer, T. C.
Hermsmeier, M. A. and Gund, T. M. A graphical representation of the electrostatic potential and electric field on a molecular surface 150
Hilmer, R. M. A molecular editor program 212
Höhne, E. *See* Bohl, M.
Hol, W. G. J. *See* Voorintholt, R.
Howe, W. J. *See* Moon, J. B.

Inubushi, K. *See* Tomita, K.
Ito, H. *See* Toma, K.
Ito, W., Nakamura, H. and Arata, Y. Protein–protein interactions on the surface of immunoglobulin molecules 60
Ivanov, V. T. *See* Daux, W. L.

Jones, C. *See* Forster, M.

Kelly, J. A., Knox, J. R. and Zhao, H. Studying enzyme-β-lactam interactions using X-ray diffraction 87
Kitaguchi, N. *See* Toma, K.
Kosters, M. T. *See* Voorintholt, R.
Knox, J. R. *See* Kelly, J. A.
Kunisawa, S. *See* Tomita, K.

Langs, D. A. *See* Duax, W. L.

Max, N. *See* Gwilliam, M.
McGavin, S., Bosshard, H. E., Carlson, C. and Postma, J. A computer graphics study of multistranded DNA molecules 225
Meyer, E. F. *See* Swanson, S. M.
Mian, I. S. *See* Goodsell, D. S.
Mitchell, E. M. *See* Brint, A. T.
Moon, J. B. and Howe, W. J. A fast algorithm for generating smooth molecular dot surface representations 109
Morris, G. M. *See* Ferenczy, G. G.
Mulloy, B. *See* Forster, M.

Nakamura, H. *See* Ito, W.
Náray-Szabó, G. Electrostatic complementarity in molecular associations 76
North, A. C. T. Applications of molecular graphics for the study of recognition 67

Ohishi, H. *See* Tomita, K.
Olson, A. J. *See* Goodsell, D. S.

Palmer, T. C., Hausheer, R. G. and Saxe, J. D. Applications of ray tracing in molecular graphics 160
Pangborn, W. A. *See* Duax, W. L.
Pèpe, G. The computer program MolPot: a useful tool in chemical reactivity analysis 233
Pletnev, V. Z. *See* Duax, W. L.
Ponsold, K. *See* Bohl, M.
Postma, J. *See* McGavin, S.
Purvis, G. D., III. *See* Sosa, C.

Quint, G. *See* Andrews, P. R.

Reck, G. *See* Bohl, M.
Reynolds, C. A., Wade, R. C. and Goodford, P. J. Identifying targets for bioreductive agents: using GRID to predict selective binding regions of proteins 103
Rich, A. *See* Tomita, K.
Richardson, D. *See* Andrews, P. R.

Sadek, M. *See* Andrews, P. R.
Saxe, J. D. *See* Palmer, T. C.
Schubert, G. *See* Bohl, M.
Simon, K. *See* Bohl, M.
Sironi, A. *See* Eufri, D.
Smith, G. D. *See* Duax, W. L.
Sosa, C., Trucks, G. W., Purvis, G. D., III and Bartlett, R. J. An application of the SCF, MBPT and CC correlated densities: a graphical display along the potential energy surface of $CH_4 \rightarrow CH_3 + H$ 28
Spurling, T. H. *See* Andrews, P. R.
Stockley, P. G. *See* Haneef, I.
Suzuki, K. *See* Toma, K.
Swanson, S. M., Wesolowski, T., Geller, M. and Meyer, E. F. Animation: a useful tool for protein molecular dynamicists, applied to hydrogen bonds in the active site of elastase 240

Talbot, S. J. *See* Haneef, C.
Toma, K., Kitaguchi, N. and Ito, H. Structure prediction of protease inhibitor region in amyloid precursor protein of Alzheimer's disease 202
Toma, K. and Suzuki, K. Mapping active sites of blood coagulation serine proteases—activated protein C and thrombin—on simple graphics models 146
Tomita, K., Hakoshima, T., Inubushi, K., Kunisawa, S., Ohishi, H., van der Marel, G. A., van Boom, J. H., Wang, A. H.-J. and Rich, A. Polyamine interaction with Z-DNA 71
Trucks, G. W. *See* Sosa, C.

van Boom, J. H. *See* Tomita, K.
van der Marel, G. A. *See* Tomita, K.
Vegter, G. *See* Voorintholt, R.
Vojta, G. M. *See* Etter, M. C.
Voorintholt, R., Kosters, M. T., Vegter, G., Vriend, G. and Hol, W. G. J. A very fast program for visualizing protein surfaces, channels and cavities 242
Vriend, G. *See* Voorintholt, R.

Wade, R. C. *See* Reynolds, C. A.
Wang, A. H.-J. *See* Tomita, K.
Weber, E. Molecular recognition: designed crystalline inclusion complexes of carboxylic hosts 12
Wesolowski, T. *See* Swanson, S. M.
Willett, P. *See* Brint, A. T.
Winkler, D. A. *See* Andrews, P. R.

Zhao, H. *See* Kelly, J. A.

KEYWORDS INDEX

α-carbon model 146
Amyloid precursor protein of Alzheimer's disease 202
Antiprogestational steroids 122
Antithrombin III 146

β-diketomethanes 3
β-lactam antibiotics 87
Bioreductive agents 103
Bit maps 113
Blood coagulation factor 146
Bond motion 212

Carboxylic hosts 12
Cast shadows 41
Computer animation 240
Computer-assisted molecular design 138
Computer graphics 54, 146
Conformational analysis 138
Connolly surfaces 109
Constructive solid geometry 160
Correlated density 28
Crystal lattice 212
Crystalline inclusion complexes 12
Cytochrome P–450 206

Dihydrofolate reductase 103
DNA models 225
Docking 212
Drug design 138
Drug metabolism 206
Dynamics 212

EC 3.4.21.36 240
Elastase 240
Electron density 28
Electrostatic potential 150
Electrostatic potential and field 76
Electrostatic potential surface 130
Electrostatic surfaces 109
Enzymatic subsite 146

Fourth-order many-body perturbation theory with double excitations (D-MBPT) (4) 28

Gramicidin 82
Graph matching 48
Graphical display 28
Graphics of molecular surface 113
GRID 103

H-bonding 12
Homology modeling 186
Host–guest compounds 3
Hydrogen bonding 240
Hydrogen bonds 3

Icosahedral matching 130
Immunoglobulin 60
Interactive computer graphics 67
Intrasequence Homology Display (IHD) 206
Ion transport 82
Ionophores 82
Isoleucinomycin 82

Kunitz-type trypsin inhibitor 202

Lesk algorithm 48
Linearized coupled-cluster method with double excitations (L-CCD) 28
Loop regions 186

Mathematical molecular modeling 186
Membrane channels 82
Mesh surface 113
Methane dissociation 28
Molecular conformation 3
Molecular dynamics 240
Molecular Electrostatic Potential (MEP) 233
Molecular graphics 196
Molecular mechanics 67
Molecular mechanics calculations 122
Molecular modeling 67, 103, 138, 160
Molecular recognition 3, 12, 67, 87, 130
Molecular simulations 186
Molecular surfaces 109, 150
Molecular volume 113
Multistranded DNA models 225
Mutation modeling 206

Nifedipine oxidase 206
Nuclear magnetic resonance (nmr) 60, 196
Nuclear Overhauser Effect (NOE) 196

$P–450_{CAM}$ 206
Polyamine-Z-DNA complexes 71
Protein A 60
Protein C 146
Protein C inhibitor 146
Protein data bank 48
Protein–protein interaction 60
Protein structure prediction 202

Raster graphics 41, 160
Ray tracing 160
Receptor mapping 138
Recognition complementarity 76

Scanline algorithm 54
Scripting 212
Second-order, many-body perturbation theory (MBPT) (2) 28
Selective binding 103
Self-consistent field method (SCF) 28
Sequence homology 206
Shading 54
Shadowing 54
Similarity 76
Solid-state NMR 3
Solvent-accessible surface visualization 242
Space-filling molecular models 54
Steroid-skeleton conformations 122
Streptomyces Griseus protease A 76
Subgraph isomorphism algorithm 48
Substrate docking 206
Symmetry 212

3-D molecular shape 113
Thrombin 146
Transparent surfaces 41
Trypsin 76

Ullman algorithm 48

Valinomycin 82
Visualization 160
Volume mapping 113
Volume rendering 41

X-ray crystal structure determination 122
X-ray crystal structures 12
X-ray crystallography 3
X-ray diffraction 87
X-ray structure analysis 71
